

TOILET FOR ME

Happily out of home
thanks to an accessible
toilet

The aim of the Toilet For Me Too project (T4Me2) is to develop a flexible toilet for use in public and semi-public space that can be used autonomously by older and disabled people when going out. The designed toilet is approachable, clean, safe and easy to use.

We are working on a toilet system with ICT-based, adaptive physical stand-up and control support with integrated safety features. It will allow people with movement or mobility restrictions, who currently require human assistance, to use the toilet independently and safely. This is the next step towards barrier-free toilets in public spaces for the disabled and elderly.

AAL

The project T4ME2 is funded in part by AAL and national research funding agencies. AAL is a European programme funding innovation that keeps people connected, healthy, active and happy into our old age. They support the development of products and services that make a real difference to people's lives – for those facing some of the challenges of ageing and for those who care for older people if they need help.

T4Me2 is funded in part by
