

TOILET
FOR ME

Self-adapting Toilets to Raise Independence

P. Panek & P. Mayer

TU Wien, Austria

(eng)aging! - Virtual Conference on Aging,
Technologies for Active and Independent Living in Old Age,
February 10-11, 2021

Toilets are (despite daily relevance and high user requirements) almost **white areas in the AAL landscape**.

Our Vision in the **toiletforme** project:

Empowering old or disabled people ...

... to use toilets without personal assistance

... to leave home and participate in societal life

by an innovative **self-adapting supportive toilet** for the **semi-public area**

- Core: motorised physical support for sitting down / standing up / optimal sitting
- Bidet seat and hygiene
- With and without automatic adaptation to different users / needs
- Integrated safety and monitoring
- Flexibility / modular technical concept with ICT backbone

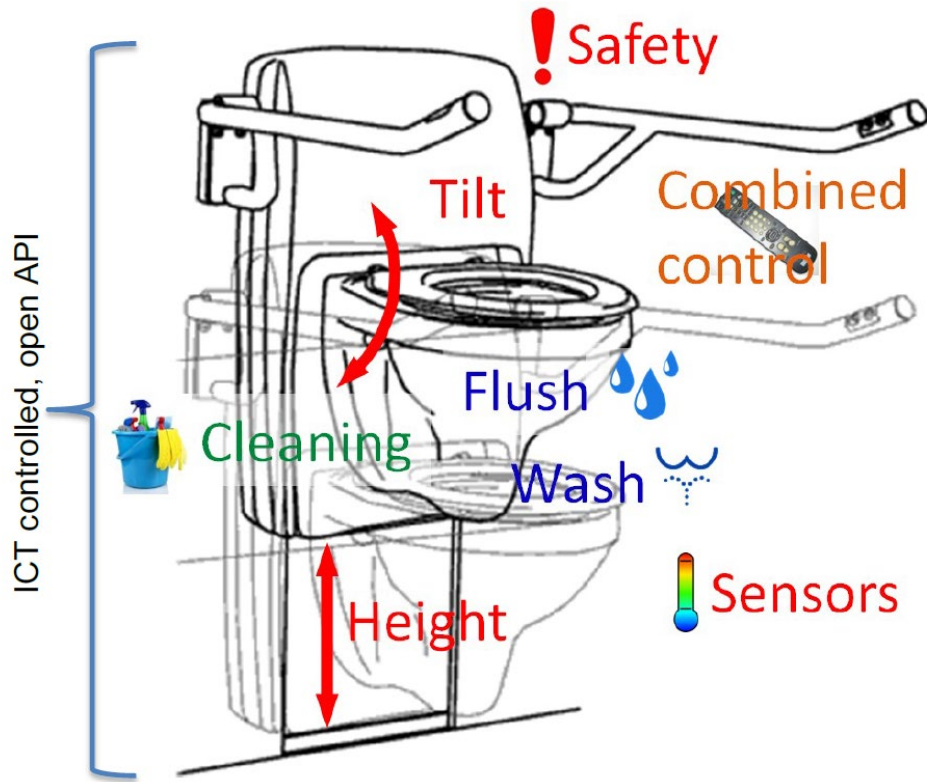

Semi-public area: e.g. hotels, museums, restaurants, shopping & community centres,

Note: For a completed project targeting similar toilets for **home settings** see <http://www.itoilet-project.eu>

Flexible system concept and lab prototype

wall mounted lift unit concept

chair type lift unit in test setup

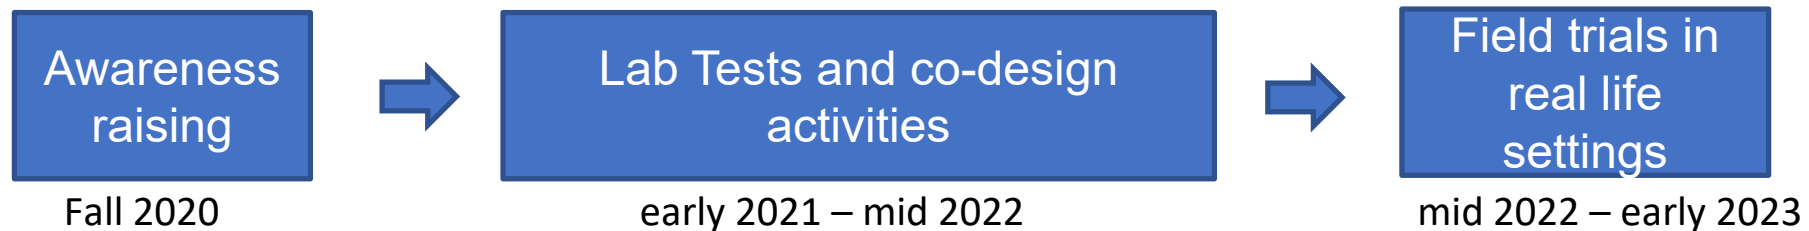

Roadmap

User Involvement (including awareness raising, co-design up to real life trials)

Development of modular prototypes (iterative cycles)

Business models (exploring pains and gains for different stakeholders)

Aiming at a new solution which can add to existing concepts:
„accessible bathrooms“ as well as emerging „changing places“
